PROJECTS

Podcast platform

- Learned challenges and problems that come with developing big scale commercial projects such as scalability and optimisation.
- Worked in a team which helped me develop management skills as well as get version control like Git to know much better, it was also a step forward into CI and CD.
- Went through the entire process of designing and prototyping a responsive website and a mobile app with good UX in mind.
- Get to know Vue.js framework, Vuex state management, SCSS and project structures.
- While working on a mobile app, I used React Native, Android Studio and discovered pros and cons of different mobile development solutions.
- I learned a lot on Node.js, Express, REST API, authentication flows, authorization processes and data validation.

Moviemaking business SPA

- This project was made freelancing which helped me develop my soft skills such as working with a client.
- Went through all stages of designing, development and deployment.
- Used React.js, styled components, GraphCMS for content management and GraphQL for API.

Portfolio SPA

- I decided to make this project in TypeScript which helped me learn the basics of this language.
- I've learned the basics of animations using anime.js.

SKILLS

Frontend

ES6
HTML/CSS
SCSS
React
Vue.js
Redux
RWD

Backend
